

Software cooperation partner

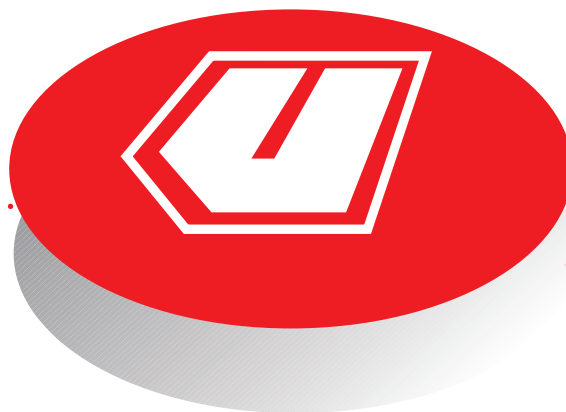

In the field of **electronic postage stamping** for the letter service sector, UNISERV is Deutsche Post's contract partner. The software developed by UNISERV was taken over by Deutsche Post and contains all existing regulations relevant to electronic postage stamping. This obliges UNISERV to implement changes in the corresponding software components as soon as possible in the electronic postage stamping procedures in close cooperation with Deutsche Post.

For mailing optimization and savings in costs for letter and Infopost (periodical class mail) in the area served by Deutsche Post, UNISERV provides the software system **ecoSort.D** with the following functions:

- validation, access requirements
- bundle, container and pallet preparation
- provision of the EDS (entry data set) format
- processing of several objects in one run
- printing of all required papers
- provision of all release files and, in addition,
- Infopost-Schwer (periodical class-heavy)
- Vario mailings
- electronic postage stamping for domestic letters, for foreign letters (letters abroad) and for Infopost (periodical class mail)

ecoSort.D is available for the following operating systems:

ecoSort

Windows NT
Windows 2000

AIX
HP/UX
Reliant UNIX
SUN-Solaris

MVS/VSE

If you would like to learn more, we will be pleased to send you additional information about **ecoSort.D** and other software solutions from our product pallet for direct marketing and address management.
